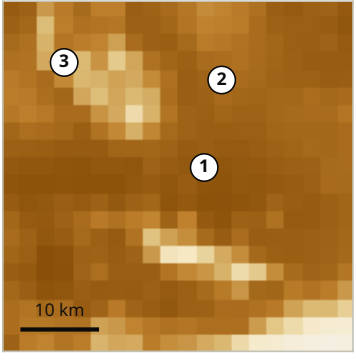
Sensitivities to 100mm less rain than normal (normal = 311mm)

Box A, example long-rains season start
(state on 18 Feb 2025, latest in our data)



End-of-May NDVI change (−Δ × 100 mm), 2 km blocks

	Δ NDVI per 100 mm	Γ Δ change per 100 mm	Θ share of Feb anomaly left
Whole box	**+0.066** (13%)	**−0.001**	**0.11**
1 most exposed	+0.076	+0.000	0.10
2 typical	+0.070	+0.021	0.10
3 least exposed	+0.047	−0.023	0.15

Higher Δ = more greenness lost when rain falls short.
